Section 1	HeroBase A/S' statement	1
Section 2	HeroBase A/S' system description of the solution Hero Flows, as well as internal controls.....	2
Section 3	Independent service auditor's assurance report on compliance with the EU General Data Protection Regulation (GDPR) and associated Danish Data Protection Act in the period of 1 September 2019 – 31 August 2020	17
Section 4	Control objectives, controls, tests, and related test controls.....	19

Section 1 HeroBase A/S' statement

This assurance report concerns HeroBase A/S' B2B service Hero Flows in relation to their compliance with the EU General Data Protection Regulation (GDPR) and associated Danish Data Protection Act for the service Hero Flows supplied to their customers.

HeroBase A/S supplies the service Hero Flows to their customers. We confirm that we, in our opinion, in all material respects have complied with the aforementioned criteria in the period 1 September 2019 – 31 August 2020.

We furthermore confirm that auditor has had access to all information and material necessary for issuing the assurance report.

Based on this, it is our assessment that we, in all material respects, have conducted appropriate operations and administration of our services.

Søborg, 23 October 2020

CTO / CIO

Section 2 HeroBase A/S' system description of the solution Hero Flows, as well as internal controls

Introduction

The purpose of this description is to supply information to HeroBase's customers and their stakeholders (including auditors) regarding the requirements and contents of the EU General Data Protection Regulation ("GDPR"), as described by the framework of the International Standard for Assurance Engagements ISAE 3000, including the International Standard for Assurance Engagements on controls at a service organisation, ISAE 3402.

Additionally, the purpose of this description is to provide specific information on matters regarding the security of processing, technical and organisational measures, responsibility between data controllers (our customers) and processors (HeroBase), and how the solution Hero Flows by means of functionality for e.g. supporting the rights of the data subjects, support our customers (the data controllers) in relation to complying with GDPR as regards their activities in Hero Flows. Thus, the description is applicable for our delivery of the product and service Hero Flows to our customers.

The description concerns the matters related to Hero Flows that cover the majority of our customers and are based on our standard delivery. Individual customer relations are not included in this description.

HeroBase and our software Hero Flows

HeroBase is a Danish IT company based in Søborg. We develop, host, and supply software in the form of a SaaS solution to contact centres. One of our core products is supplying the software Hero Flows, which is supplied as a SaaS-solution, which means it is hosted in our own data centres and is based on a flexible and scalable subscription-based model.

Hero Flows, which this assurance report concerns, is one of the largest products in our palette of solutions collected under the Hero brand. Other solutions include e.g. the in- and outbound calling platform Hero Outbound. Hero is chosen as the umbrella term, as we with our solutions want to appeal directly to the end users of our software; when it comes to Hero Flows, this for the most part means users and employees in contact centres and internal backoffice departments. By supplying a fast, intuitive, efficient, and personal platform, we strive to be the preferred choice for the "everyday heroes", which the users and employees in the contact centres are dubbed internally in HeroBase.

We create the foundation for the most efficient contact centre

The name Hero Flows has been chosen for our platform which can be characterized as a broad and multi-functional marketing automation solution. By defining "segments" – see them as dynamic search lists – the platform enables selecting parts of your database consisting of customers and/or potential customers and using these data groups in digital and automated communication flows or workflows. These flows or workflows are called "automations", and effectively allows you to define step by step data journeys, where persons or businesses are targeted with communication according to the permissions you own; while being able to respond individually to the cross channel communication, and the platform acting on their responses and updates. Automations can combine individual activities altogether consisting of cross channel communication (e-mails, SMS, calls, direct mails etc.), system integrations, webhooks, website tracking, SoMe integrations, macros and much more.

While especially strong when used together with Hero Outbound, Hero Flows can - even without products from the remaining palette of Hero solutions – facilitate manual workflows transformed into automated digital processes, while updating, processing and transferring data in real time, while storing data for as long as needed – effectively for as long as you need it (according to your legal needs and relevant data protection legislation, e.g. GDPR) or practically only during runtime.

A central system among other business systems

Specifically, regarding integrations, Hero Flows offers a number of possibilities for integration with other solutions when it comes to data in and out of the platform; activity creation; documentation of activities etc. Hero Flows has a well-developed API, which customers can make use of at no additional cost. This SOAP and REST-API allows access to the customer's Hero Flows data, and allows retrieving, updating, and deleting logical entities. If the customer to a wider extent wants data pushed from Hero Flows to external systems, instead of pulling data from our API, the platform has built-in "triggers" – a kind of webhooks – where rules can be setup to perform certain actions when certain things occur in the system. Actions include, among other things, calls to external SOAP- or REST-APIs, whereby you can integrate Hero Flows with all other systems without writing a single line of code – as long as you have an API that can be called from Hero's web servers (a limited IP range) with either XML or JSON-objects.

The above is a general description of Hero Flows and a short description of some of the tools that the platform makes available. Regarding the customers on Hero Flows, HeroBase wants to create a long-term customer relation, where the customer over time along with its customer experience manager starts using more and more parts of the platform, and where Hero Flows is integrated to other key systems in the customer's business. We believe that this is possible through a technically strong and stable platform, where security and performance are given pride of place, with an engaged technical and customer-focused team behind this.

Technical setup and placement

Hero Flows is a web application based on .NET (the primary language is C#) and with a front end based on e.g. JavaScript and MVC. The database technology is MSSQL, and hosting is via the Danish data centres GlobalConnect (Taastrup) and InterXion (Ballerup) as well as AWS' (Amazon Web Services) Frankfurt and Dublin locations. The only AWS locations we have chosen services in, and where data thereby is located in, are AWS' Dublin site in Ireland and AWS' site in Frankfurt, and thereby no data in Hero Flows leaves the EU. Our infrastructure and architecture are designed in such a way that there is redundant failover equipment for everything from firewalls and switches to database and web servers. Most of the equipment is also placed in both data centres, which means that one location can resume operations, if another location is impacted by reduced access or other problematic circumstances, internal as well as external.

HeroBase Infrastructure

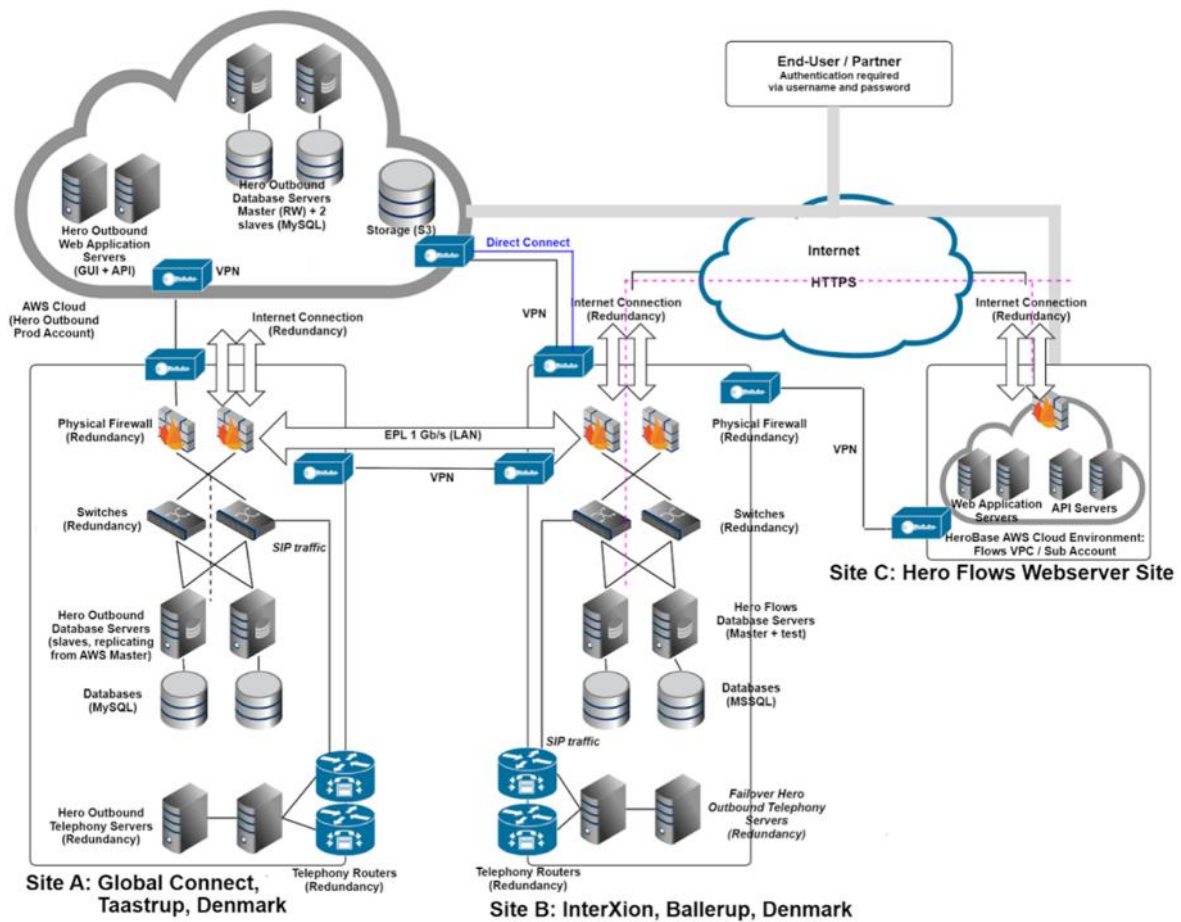

Fig. 1: The HeroBase general infrastructure as at mid-2020.

We believe in appealing to the everyday heroes by designing complete solutions for their workplaces, and by supplying solutions which turn contact centres into competitive and efficient companies by optimising working time and the profitability of the centres' tasks, simultaneously with our adjustment of the platform to new, external requirements such as new requirements for payment solutions, contract documentation, GDPR etc. We believe that we have Northern Europe's best software for the industry, and we have international growth objectives based on a healthy and solid home market, where the close daily contact and long-term customer relation are in focus!

Organisation and responsibility

HeroBase employs 40 persons in Denmark, Sweden, Ukraine and Finland. About half the employees are placed in Denmark and have their daily workplace at the office in Søborg.

The management consists of an ultimately responsible CEO, and below him a CTO with all technical responsibility; a CXO responsible for customer contact, customer relations, and support; and a CSO responsible for sales. In addition, a staff function with CFO as well as administration and HR.

The IT department, led by HeroBase's CTO, consists primarily of developers in a "DevOps" constellation, where two persons are dedicated to operations, optimising servers and infrastructure, monitoring and handling operational issues, but where all have operations as their first priority in case of technical issues on the platform. It is an objective that actual development, understood as improving existing features and developing new ones, constitutes 70 % of the department's time.

The developers are organised in frontend and backend expertise, with a chief architect who makes the general decisions on language, technology, and new frameworks on the basis of a thorough analysis and in cooperation with HeroBase's CTO. In addition, a network administrator is responsible for network and telephony, whereas a project manager and tester has a close cooperation with HeroBase's other departments.

Management has the overall responsibility for IT security and that the company's general IT security policy is observed.

Next to the daily organisation based on function, a security organisation has been organised with an information security committee comprising key employees from various parts of HeroBase, including management, and an information security coordinator who has the daily, operational responsibility for a number of tasks defined in HeroBase's information security code of practise. The information security coordinator is additionally responsible for all employees being aware of the information security manual, including rules and procedures, helps them to access and understand it, and acting on and observing the rules. In conclusion, the responsibility for a variety of matters related to the business systems that support the daily work with supplying the product and service Hero Flows is delegated to the system owners.

Risk management in HeroBase A/S

Risk management in HeroBase A/S is done for all areas connected with delivering the product and service Hero Flows, and which thereby may have financial consequences for our customers. Risk analysis, assessment, and management are based on ISO 27005, and are based on impact analyses and vulnerability analyses at service level. Service is understood as business systems supporting the delivery of Hero Flows as well as Hero Flows in itself as a customer system.

The business in HeroBase answers the questions in the impact analysis, while the IT department in HeroBase performs the vulnerability analyses. Vulnerability analyses are reported at service level, but are based on assets, which are the physical and virtual sub-elements that altogether constitute the platforms or business systems. For instance, the service Hero Flows has a number of dependent assets such as firewalls, switches, web application servers, database servers etc. When reporting takes place at service level, it is also obvious that it is the "lowest common denominator" that defines e.g. maximum possible downtime. If a database server always can be taken over by a failover partner after boot and DNS change on five minutes, but if it in the utmost theory may take 15 minutes before a physical firewall will have been replaced by a booted and configuration loaded redundant partner, it is obvious that it is these 15 minutes that will define the possible downtime.

Risk analyses are conducted as consequence and vulnerability analyses at least annually, after which the collected security overview is brought up for the information security committee and finally HeroBase's management, for the definition of further actions.

Generally, on our control objectives, including rules and procedures as well as implemented controls

The most important thing in the supply of the product and service Hero Flows is a stable and secure platform. It is a declared and management embedded promise that we would rather spend twice the time on solving a development task or another technical task than what was strictly necessary to solve the task, in order to ensure security and stability when we release updates to our customers.

To ensure that the supply chain can function, and that HeroBase at the same time can function as a competitive business, including achieving scalability over time, working procedures and processes connected with

the supply of the product and service Hero Flows are based on our information security code of practice, on top of which are defined procedures and controls with associated contingency plans etc.

Above all is our top-level information security policy, which is signed by HeroBase's CEO and which sets the framework for the information security work. This is valid for all employees and close cooperative partners (such as consultants).

The framework for the information security code of practice is ISO 27001, and the code of practice is classified according to the following control areas:

-) Information security management and security policy
-) Organisation of information security
-) Human resource security
-) Asset management
-) Access control
-) Cryptography
-) Physical and environmental security
-) Operations security
-) Communications security
-) System acquisition, development and maintenance
-) Supplier relationships
-) Information security incident management
-) Information security aspects of business continuity management
-) Compliance

In addition, we have selected a number of procedures and policies within the framework of data security and GDPR, and we take our responsibility as processor for some of the country's largest companies extremely seriously. Up to the implementation of GDPR we have expanded our platform with a number of features that make it easier for our customers as data controllers to comply with the requirements imposed by e.g. GDPR. We would like to be considered *co-data controllers* to a higher extent than solely as processors, and we gladly express this in various connections. As a processor we have furthermore ensured that we have processor agreements with all our customers on Hero Flows who in this constellation are data controllers.

GDPR and HeroBase's role and responsibility as a processor

GDPR is for everybody – but it is essential to understand how the specific parts of GDPR find use for each player depending on the type of organisation in question and how the organisation is subject to activities connected with the processing of data.

Naturally, HeroBase is the data controller for our own data. This means that we have performed data flow analyses for all processes in our business where personal data is stored or exchanged (internally or with a third party). The data flow analyses enable us to see exactly which types of data for which types of data subjects that are transferred or stored, and with which authority.

Additionally, as the provider of the software and solution Hero Flows, HeroBase is the processor for all our customers. This means that we in our software Hero Flows are hosting data that belongs to our customers as data controllers, and that we via our software provide a selection of tools and functionality that our customers – the data controllers – can use for working with the data. We only act on instruction from our customers and the framework for these instructions is defined in the contract between the customer and HeroBase as well as the associated processor agreement.

The articles 4-49 in GDPR thus find general use at HeroBase. But particularly relevant regarding HeroBase's role as processor is that we pay particular attention to the distinction between our own data and our customer's data. Data (and services – systems – wherein data is found) is classified and labelled according to this, and all technical and organisational measures – including internal procedures and training – are organised according to this distinction.

The following sections examine these measures and aspects in detail with a focus on HeroBase's role as a processor, i.e. measures that concern our processing of the data controllers' data, and how our software Hero Flows is designed to support our customers as data controllers when it comes to the requirements that GDPR poses to data controllers.

Principles relating to processing of personal data

Hero Flows is a generic and flexible platform that enables the input and entering of all sorts of data in principle. Lead profiles/screens, fields (with associated attributes such as type of data, field validation, etc.) are defined, created and maintained by the customer itself that fully decides and is responsible for what data is input in, stored in, processed in, read out, and deleted from Hero Flows.

HeroBase as a supplier neither accesses nor processes this data, unless we receive an explicit instruction from the data controlling customer for aiding with e.g. inputting data or rectifying/changing data in connection with the customer's campaign activities.

There is a data processing agreement between HeroBase and all customers. The contents and principles for this is specified in later sections.

Through procedures and regular training HeroBase has ensured that the classification of customer data and the associated processing principles are known by all employees.

Lawfulness of processing

If HeroBase receives instructions from the customer that are assessed to be contrary to current legislation or general sound principles for data processing, HeroBase will without undue delay bring this to the customer's attention.

HeroBase does not under any circumstances exchange or disclose the customer's data to third parties. An exception to this is situations where national special legislation requires that HeroBase provides information, e.g. if Danish authorities request data on certain phone calls as part of an investigation. In such cases the only personally identifiable data disclosed will be a phone number – no other personal data will be provided.

Additionally, as a part of our information security code of practice and information security procedures, HeroBase has defined responsibility for contact with relevant authorities, where this is required.

We have defined controls ensuring that customer data is not accessed by employees in other situations than helping the customer with support, or if separate instructions have been received from the customer.

Consent

By means of the previously mentioned customer-created lead profiles/screens and field definitions, Hero Flows facilitates that the customer can create fields in Hero Flows for explicit documentation of consent and approval given by persons that are subject to sales, telemarketing, and communications activities through Hero Flows – these persons are also called "leads".

Specifically, fields may be created for e.g. “URL for contest or homepage where the lead has given consent”, “type of consent or approval given”, “date and time for consent”, “IP address (if available) from where the consent has been given”, and similar.

The above-mentioned examples will typically be data that is present and with advantage can be input on the lead *before* processing via Hero Flows.

In many cases the dialog that the lead is subject to will give rise to a need for further consent, approval, or accept (e.g. of an order) being registered. In these cases, corresponding fields can be created in Hero Flows, such as channel-dependent approval for communication and marketing, continued interest in receiving digital communication, result of sales presentation and similar.

These consents, approvals, and accepts can be collected by entering data in fields, by sending a link to digital accept if answers are updated to Hero Flows by means of the software’s associated SOAP- and REST-API, or by updating an external system.

Processing of various categories of personal data

We have classified all data belonging to our customers as data controllers as “customer data”. These are subject to the maximum-security classification, and we thus do not have any lower security classification for Article 6 data than we have for Article 9 or 10 data.

We have a processor agreement with all our customers. When this is based on HeroBase’s processor agreement template, we have asked the customer to account for what types of personal data (categorised according to Article 6, 9, 10, respectively 87) the customer intends to input and enter into Hero Flows.

Every six months we take stock of whether there is an increasing tendency of indication of input/collection of Article 10 data, and if this is the case, we perform a design analysis of whether parts of our software should be restricted on category level to especially consider particularly sensitive data, e.g. by having customer administrators define on field level in campaign templates whether a field with the greatest likelihood will contain Article 6, 9, 10, or 87 data. However, at the time of writing we have not assessed this need to be present yet.

We are aware that Article 87 is not in essence a data category article online with 6, 9, or 10, but a special condition regarding national identification number. However, we have decided to designate CPR-numbers as “Article 87 data” for interpretative reasons.

We have recognised that it is natural for a number of our customers that Article 9 data is present in Hero Flows, as we have a relatively strong representation within the business sectors of insurance, unemployment funds, and trade unions.

Rights of the data subject

Hero Flows registers all changes to data for a lead processed in our software, as well as all interactions with the lead in question.

As data controllers our customers can retrieve all leads input into and processed in Hero Flows and see a full list of interactions with each lead.

As data controllers our customers can retrieve all leads input into and processed in Hero Flows and see a full list of all data present on each lead.

Thereby all processing activities are explicitly registered and are available to the customer directly in Hero Flows' user interface.

As data controllers our customers can retrieve individual leads, block them for future contact, and/or delete all data present on each lead.

As data controllers our customers can retrieve individual leads and edit/rectify information on each lead.

As data controllers our customers can export the above-mentioned data, such that data can be transferred to a data subject; deleted from Hero Flows, and that the data subject with its data can be moved to another system or service.

Thereby Hero Flows supports our customers as data controllers when it comes to complying with the rights of the data subjects and as a starting point handling these efficiently and without undue delay.

General obligations as processor

We have procedures that ensure that we comply with our obligations as a processor and to the widest extent possible support our customers as data controllers in relation to the requirements that GDPR poses to them.

Our functions for supporting the rights of the data subjects, cf. the previous section, are collected on a few different pages in Hero Flows that through module and rights management at the customer itself ensures our customers' possibility of allocating functional rights to using the functions according to a work-related need at the customer.

If HeroBase should receive an application directly from a data subject, instead of via the customer, HeroBase will within the framework of the legislation request further information from the data subject, and without undue delay forward the application or request to our customer. We have procedures for this that are communicated to and trained with our employees.

We have ensured processor agreements with sub-processors, including hosting and housing partners.

We have ensured that the requirements imposed by our customers on us through the contract and the processor agreement correspondingly are imposed on sub-suppliers and sub-processors.

Through regular training and campaigns, we ensure awareness of significant areas within information security, data protection, as well as (but not limited to) GDPR.

We have procedures for data protection being part of the considerations and choices regarding design when Hero Flows is changed and improved.

Acting according to instruction from our data controlling customers also include how long data is stored in Hero Flows.

Instructions are given to HeroBase as processor through settings that the customer configures in Hero Flows.

Deletion rules for data can be defined through segments and macros, such that all (or selected) data on leads which matches criteria defined by the customer as a data controller, is automatically is deleted after "x" days.

These rules are executed on a nightly basis on Hero Flows' database servers and delete data according to rules set up by our customers.

Data is stored on a backup for 7 days, after which data is also deleted from backup, and thereby after 7 days will be deleted from all database instances without the possibility of restoring.

Security of processing, notification, and communication

We have established adequate technical and organisational measures, which are detailed in a later main section.

We have chosen ISO 27001 to be the information security framework that our information security code of conduct, procedures, and controls are based on.

We have procedures for managing information security incidents, including data breaches, as well as information security incidents.

We have procedures for notification to relevant authorities in cases where this is necessary, as well as notification to our customers as data controllers in case incidents or events concern these or might do so. This is done within set time limits that are defined in the processor agreements.

Data protection impact assessment

We have procedures for conducting data protection impact assessments (DPIA) in connection with the conduction of projects and development of Hero Flows as software.

Data protection officer (DPO)

HeroBase has deselected having a data protection officer (DPO), cf. Article 37. The reason for the deselection is that HeroBase has a relatively insignificant amount of personal data for which HeroBase itself is the data controller of, and thus mainly has the role of being a processor and supplier of Hero Flows. On the basis of this HeroBase does not systematically process personal data, just as it does not concern a large amount of sensitive or especially sensitive data.

Instead we have appointed and organised a full security organisation besides the usual operations organisation. The security organisation consists of an information security committee and an information security coordinator. The committee and the coordinator ensure embedding of the continual work with information security and additionally has a number of obligations defined by our information security code of conduct and procedures.

Transfer of personal data

All data in Hero Flows belongs to our customers and HeroBase does not in any connection transfer, assign or exchange data with third parties. All exchange, output, and transfer of data is solely done by the customer itself by using functions in Hero Flows or our associated SOAP- and REST-API.

Our hosting and housing partners, which we have sub-processor agreements with, only have data stored in the EU, cf. previous section. Data in Hero Flows is thus never transferred to third countries unless the customer decides to do this outside of the engagement with HeroBase.

Additionally, we have procedures concerning the portability of data, including management of physical media.

Technical and organisational measures

In this section we will elaborate on a number of matters regarding HeroBase's technical and organisational measures regarding the supply and operation of the software and solution Hero Flows.

Human resource security

We have defined a number of procedures that ensure security prior to, during, and, if relevant, after employment.

Procedures concerning processes before a potential employment ensure that potential employees are screened and that relevant matters are checked within the framework of current legislation.

All employees must adhere to a number of terms regarding confidentiality about own, HeroBase's, and customers' matters. This is described in each employee's employment contract.

During employment it is ensured between the employee, the immediate manager, and the information security coordinator that the employee is kept up-to-date regarding and comply with aspects regarding information security.

We have procedures that ensure that employees at the termination of employment cannot cause damage to HeroBase or the system Hero Flows by means of immediately removing rights to business systems and check this.

In addition, a number of sanctions have been defined for the event that the information security is breached or disregarded.

Asset management

All assets are defined with ownership, criticality, and technical dependencies such as services that are dependent on certain assets. Servers, systems, network etc. are documented and available for relevant technical personnel. At the introduction of new equipment and new systems, or at changes to architecture and infrastructure, relevant documentation is updated to ensure that this is always up-to-date.

The acceptable use of systems for employees has been defined, which i.a. includes guidelines for accessing, using, and exporting data. Data is considered categorised according to GDPR's categories for this purpose, and special procedures are applicable for certain types of data.

We have procedures concerning the management of portable devices, disposal of devices, as well as transport of portable, data-carrying devices, and for the classification and labelling of data. This means, for one thing, but is not limited to, that data solely must be stored in systems and on physical and virtual servers labelled and specified for the purpose. Customer data must not in principle be present anywhere else, including locally, on USB sticks, on other disks (flash drives), and similar. An exception to this is if a customer has requested in writing to be handed over data, or if it is necessary to transport data between two servers, and the transmission cannot occur via network.

If data is stored temporarily on such USB sticks, drives and similar, data must, to the widest extent possible be anonymised or pseudonymised, and the physical device (including folders on it) must be password protected. As a rule, these devices must never be sent by regular mail to customers but must be transported by HeroBase's employees or picked up by the customer.

When physical servers are decommissioned, and data on hard disks no longer needs to be present on the drives in question, these disks must either a) be formatted in such a way that restore of data no longer is possible, b) be physically destroyed and the disks disposed of by employees in HeroBase's IT department, or c) both.

Access management

We have a string of procedures that ensure that access control and the allocation of rights occur in compliance with the established security level.

Only employees with a work-related need for having access to systems and data are granted access to the concerned business systems and associated data.

The heads of department are responsible for access rights being granted on the basis of a work-related need and in consideration of regulatory and contractual obligations.

We have a number of controls that ensure that this occurs on an ongoing basis, and that all access corresponds to the work-related needs in each function and for each employee.

We have defined a string of requirements for the protection of all devices (PCs, mobile phones, tablets) as well as passwords in all business systems. Employees are trained and checked regularly within these areas.

We have a number of procedures that ensure that only a group of privileged personnel has access to system administrator tools, central servers (e.g. domain controller), source code etc.

Production servers and other servers containing production data and customer data are only present in HeroBase's data centres and not at any office locations. Only specially trusted employees with a work-related need have access to the data centres. These accesses are assessed and inspected regularly.

Cryptography

We have procedures for the use of cryptography, including the generation and management of encryption keys and certificates.

This means, i.a., that Hero Flows must have a valid SSL certificate, which HeroBase verifies, such that data exchange only occurs in a secure and encrypted manner (through HTTPS). SSL-certificates are managed solely by the IT department, where the application architect and network administrator are responsible for SSL certificates. No certificates may be acquired or issued bypassing these.

This requirement concerns access to Hero Flows through the user interface and through API alike.

Physical and environmental security

Servers are only placed in data centres provided by suppliers who have been issued, and annually can show, assurance reports at the level of ISAE 3402.

HeroBase's office premises are subject to a number of procedures that secure the office as well as material and units stored at the office, regardless of servers only being placed in data centres.

This entails, i.a., procedures aimed at employees describing security measures for offices, common areas, and similar areas.

Operations security

Operating procedures and monitoring

We have operating procedures for the IT department's most significant duties, and these procedures are subject to versioning and change management.

We have defined the responsibility for ensuring that an assessment of the capacity requirements for critical IT systems is performed regularly.

Due to our size we cannot have a complete overlap on all functions, but cf. previous description we aim, by virtue of segregation of duties and thorough as well as continuous documentation and knowledge sharing, to avoid dependence on individuals. The IT department, led by HeroBase's CTO, consists primarily of developers in a "DevOps" constellation, where two persons are dedicated to operations, optimising servers and infrastructure, monitoring and handling operational issues, but where all have operations as the first priority in case of technical issues on the platform or information security issues.

All instances of Hero Flows are monitored by means of monitoring tools. Thereby we monitor, among other things, access to servers, CPU/memory/disk I&O usage, similar for database servers, lag (in milliseconds) between master and slave databases, heavy SQL queries made by applications or directly by a client, and much more.

Critical levels and values are defined for all these monitoring areas. Alarms must trigger when these values are reached and must be sent to key employees either via email (for less critical alerts) or SMS (critical alerts).

Historical logs and events are regularly reviewed in a structured manner to perform improvements and optimisation.

We have procedures for backup besides continuous data replication, and the usability of backups for restore is regularly checked.

Development of Hero Flows, management, and quality assurance

The development of Hero Flows, including release of changes, occurs according to HeroBase's formalised and embedded development model.

Development occurs in development environments where code is branched from the main branch/"default". These development branches are connected with the staging database, where test data is found. Test data and production data are thus completely segregated, and customers' data must not be copied from master to staging without approval from HeroBase's CTO. If this permission is granted, it can and will only comprise configuration data in order to test and develop up against true, complex data in order to ensure the quality of the development, but it must and can never comprise data on the customer's prospects, employees or similar which are personally identifiable and can be categorised in accordance with GDPR's articles 6, 9, 10, and 87.

Function testing takes place in development branches (also called feature branches), after which code is tested and merged to pre-production branches, from which code is tested again prior to finally deployed for production.

Logging

We have procedures concerning the scope, processing, protection, and check of logging on various system types.

All logins and significant user actions in Hero Flows are monitored and logged. The logging of significant user actions concerns i.a. data export.

All changes to data are registered.

These registrations are also available for customer administrators through visible logs in the user interface.

The logging level also comprises employees at HeroBase, whereby it is checked that these do not access customer data without a work-related need for this. This is checked and tested in a detailed manner on the basis of spot checks.

Communications security

We have procedures for network management and monitoring, including maintenance of network and network equipment.

Traffic on all connections and interfaces are monitored in relation to data volume over periods of time. Alarms have been set up that are triggered and sent to technical personnel in case of abnormalities (traffic spikes, significant delays between master databases and slave databases, and much else).

This ensures ongoing, correct capacity management as well as a precaution against misuse.

Exchange of information solely occurs by means of secure connections. If this occurs via the public Internet, data is encrypted (in principle by means of HTTPS). Systems that can communicate on internal connections (on internal IP address behind firewall – and between data centres via fibre connection, through which servers on various locations also can reach each other on internal IP address) use this method for data exchange via LAN.

Supplier relationships

In all cooperation agreements with suppliers we have defined security requirements and minimum requirements for the services provided to us by the supplier.

We have ensured that the matters we base our agreement on regarding the use of the product and service Hero Flows in relation to customers are in accordance with our requirements to our suppliers.

We regularly, and at least annually, review the cooperation agreements, just as we obtain assurance reports for the entered agreements.

We have defined a responsibility for quarterly reviewing reports from the external service providers for operational equipment regarding events, issues, errors, crashes, and logging.

Information security incident and event management

The information security committee has defined procedures for information security incidents and events, which are embedded in HeroBase and which the management is responsible for being observed.

We define information security incidents as:

-) The detection of successful external and unwanted intrusion in systems
-) Finding customer data (hosted in the master database for Hero Flows) online, where there is an obvious or strong suspicion that the publication of data has not occurred with the customer's approval and intent
-) Finding data on current or former employees in HeroBase online, where publication of data has occurred without HeroBase's involvement or intent
-) Finding other confidential business data online (according to the same directions) defined as customer contracts, revenue, or information which is classified as secret according to further definition by the information security committee

We define information security events as:

-) Events that, if they had not been discovered, could have led to security incidents
-) Situations where unintended data or information by accident (due to human error) has been sent to other recipients than the intended, and that it is assessed that this may entail damage or serious consequences for HeroBase

Procedures have been defined for both, which describe for employees and managers how they should act in case of incidents and events, including (but not limited to) collecting evidence and contact with authorities, if necessary.

All employees are aware of the instructions and have trained them.

Information security aspects of business continuity management

We have defined the responsibility for preparing emergency plans, contingency plans, and restore plans.

We have established adequate redundancy to meet the requirements for availability and the guarantees for uptime that we have agreed in contracts with our customers.

All technical employees have trained the plans.

Plans and procedures are regularly reviewed and in the wake of each operational issue where human action has been necessary to re-establish operations on parts of the platform.

Compliance

This report has been prepared to supply in-depth information to our customers and their interested parties (including auditors) regarding the requirements and contents of the EU General Data Protection Regulation ("GDPR"). As part of checking our implementation and embedding of our technical and organisational measures, an ISAE 3402 assurance report has been prepared besides this present assurance report.

We regularly check that rules and procedures are observed, followed, and documented.

We ensure that we act in accordance with applicable legislation and furthermore that we adhere to the requirements posed to documentation by national legislation.

We ensure that personal data is protected and processed in accordance with the Data Protection Act and GDPR.

For years, we have used ISO 27001 as the framework of reference for information security in HeroBase and regarding the development and operations of Hero Flows. The mentioned ISAE 3402 assurance report is our second ISAE 3402 assurance report for the delivery of the product and service Hero Flows. It has been embedded in the management that compliance with rules and procedures in our information security code of practice, including controls connected with rules and procedures, must be formalised, documented, and subject to annual audit by an independent external IT auditor, which is why we also in future will prepare ISAE 3402 (type II) assurance reports.

Complementary controls

Regarding our customers, HeroBase is responsible for delivering the services and the operations described in the contract concerning Hero Flows between the customer and HeroBase.

Matters not comprised by the contract are the customer's own responsibility.

Creation of users, protection of user information, and secure login procedures are the responsibility of the customer. The customer can enable MFA login on users in Hero Flows. HeroBase recommends our customers to do this to the extent it is possible for the customer, in order to protect the customer's data and activities in Hero Flows.

Regarding data uploaded to Hero Flows by the customer, it is a significant division of responsibility that the customer is the data controller, and HeroBase is the processor. Thus, HeroBase only acts according to instructions from the customer. In the contract or in the processor agreement that the customer provides HeroBase the customer gives an indication to HeroBase of what types/categories of data that the customer intends to upload to and process in Hero Flows. A processor agreement must be established between HeroBase and the customer.

Regarding GDPR, HeroBase provides a string of functions on the platform Hero Flows that enable the customer to comply with GDPR's requirements of data controllers. These functions include (but are not limited to) the possibility of exporting full data logs, the possibility of correcting data, the possibility of deleting data and much more.

It is the customer's responsibility to have defined and embedded a procedure at the customer that ensures compliance with GDPR by i.a. complying with the requirements of response time regarding enquiries from private individuals/data subjects. HeroBase provides functions through the tool Hero Flows, but cannot be held responsible for the customer's definition, embedding, and observation of procedures that are to ensure the customer's compliance.

Section 3 Independent service auditor's assurance report on compliance with the EU General Data Protection Regulation (GDPR) and associated Danish Data Protection Act in the period of 1 September 2019 – 31 August 2020

To HeroBase A/S' management, the company's customers and their auditors

As agreed, we have reviewed HeroBase A/S' service Hero Flows in relation to their compliance with the EU General Data Protection Regulation (GDPR) and associated Danish Data Protection Act in the period 18 December 1 September 2019 – 31 August 2020.

Our opinion is issued with reasonable assurance.

The assurance report is intended solely for the use of the management of HeroBase A/S, their customers and their auditors for assessing the existing procedures, and must not be used for other purposes.

Management's responsibility

HeroBase A/S' management is responsible for implementing and ensuring the maintenance of procedures in connection with their service Hero Flows as required by the EU General Data Protection Regulation (GDPR) and associated Danish Data Protection Act.

Service auditor's responsibility

On the basis of the conducted work, it is our responsibility to express an opinion on whether HeroBase A/S' service Hero Flows complies with the requirements stated in the EU General Data Protection Regulation (GDPR) and associated Danish Data Protection Act.

We have conducted our work in accordance with ISAE 3000, Assurance engagements other than audits or reviews of historical financial information and additional requirements under Danish audit regulation in order to obtain reasonable assurance for our opinion.

REVI-IT A/S applies International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Ethics for professional Accountants issued by the International Ethics Standards Board for Accountants, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

Our work comprised inquiries, observations as well as assessments and examination in spot checks of the information we have been provided.

Due to limitations in all control systems errors or fraud may occur, which might not be uncovered by our work. Also, the projection of our opinion on transactions in subsequent periods is subject to the risk of changes to systems or controls, changes to the requirements in relation to the processing of data or to the company's compliance with the described policies and procedures, whereby our opinion may not be applicable anymore.

Limitations in controls at a controller

HeroBase A/S' description has been prepared to meet the common needs at a broad range of controllers and may not, therefore, include every aspect of Hero Flows that each individual controller may consider for important according to their specific circumstances. Also, because of their nature, controls at a processor may not prevent or detect all personal data breaches. Also, the projection of any evaluation of effectiveness to future periods is subject to the risk that controls at a controller may become inadequate or fail.

Opinion

This opinion is formed on the basis of the understanding of the criteria accounted for in the assurance report's introductory section and which are based on the requirements in the EU General Data Protection Regulation (GDPR) and associated Danish Data Protection Act.

It is our opinion that HeroBase A/S' delivery in connection with their service Hero Flows in all material respects has met the criteria mentioned in the period 1 September 2019 – 31 August 2020.

Description of tests of controls

The specific controls tested, and the nature, timing and results of these tests are listed in the subsequent main section.

Intended users and purpose

This assurance report is intended only for customers who have used HeroBase A/S' service Hero Flows, and their auditors, who have a sufficient understanding to consider the description along with other information, including information about controls operated by customers themselves in assessing compliance with the requirements of the General Data Protection Regulation and associated Danish Data Protection Act.

Section 4 Control objectives, controls, tests, and related test controls

The following overview is provided to facilitate an understanding of the effectiveness of the controls implemented by HeroBase A/S in the delivery of their service Hero Flows according to compliance with the EU General Data Protection Regulation (GDPR) and associated Danish Data Protection Act. Our testing of functionality comprised the controls that we considered necessary to provide reasonable assurance for compliance with the specified articles in the period of 1 September 2019 – 31 August 2020.

The requirements evident directly from the EU General Data Protection Regulation (GDPR) or the Danish Data Protection Act cannot be derogated from. However, it can be adjusted how the security is implemented, as the security requirements in GDPR in several respects are of a more general and overall character that i.e. must consider purpose, nature of processing, category of personal data etc. In addition, there may be specific requirements in each customer contract that may have a scope extending beyond the general requirements of the Data Protection Act. If this is the case, these are not covered by the following.

Moreover, our assurance report does not apply to any controls performed at HeroBase A/S' customers, as the customers' own auditors should perform this review and assessment.

We performed our tests of controls at HeroBase A/S by taking the following actions:

Method	General description
Inquiry	Interview, i.e. inquiry with selected personnel at the company regarding controls
Observation	Observing how controls are performed
Inspection	Review and evaluation of policies, procedures, and documentation concerning the performance of controls
Re-performing control procedures	We have re-performed – or have observed the re-performance of – controls in order to verify that the control is working as assumed

Control objective A – Instruction regarding the processing of personal data

Procedures and controls are observed that ensure that instruction regarding the processing of personal data is complied with in accordance with the entered processor agreement.

No.	Processor's control activity	Auditor's performed test	Test result
A.1	<p>There are written procedures containing requirements that processing of personal data may only occur on the basis of an instruction.</p> <p>Regularly – and at least annually – an assessment is made of whether the procedures should be updated.</p>	<p>We have inquired about documentation for the company only processing personal data on the basis of instruction from the controller, and we have inspected processor agreements and an overview of processing being performed in the company.</p> <p>We have inquired about periodic review of the information security policy, and we have inspected documentation showing that the information security policy is updated.</p>	No deviations noted.
A.2	The processor only performs the processing of personal data evident from the instruction from the controller.	We have inquired about whether management ensures that the processing of personal data only occurs in accordance with the instruction, and we have inspected a control from the company.	No deviations noted.
A.3	The processor immediately notifies the controller if an instruction according to the processor is contrary to the General Data Protection Regulation or data protection provisions in other EU law or the Member States' national legislation.	We have inquired about guidelines for managing unlawful instructions, and we have inspected the procedures.	No deviations noted.

Control objective B – Technical measures

Procedures and controls are observed that ensure that the processor has implemented technical measures for ensuring relevant security of data processing.

No.	Processor's control activity	Auditor's performed test	Test result
B.1	<p>There are written procedures containing requirements on the establishment of agreed security measures for the processing of personal data in accordance with the agreement with the controller.</p> <p>Regularly – and at least annually – an assessment is made of whether the procedures should be updated.</p>	<p>We have inquired about documentation showing that the company's established security measures for the processing of personal data are in compliance with the agreed measures, and we have inspected procedures.</p> <p>We have inquired about periodic review of the information security policy, and we have inspected documentation showing that the procedures are updated.</p>	No deviations noted.
B.2	<p>The processor has performed a risk assessment and on the basis of this, has implemented the technical measures assessed to be relevant in order to achieve adequate security, including establishing the security measures agreed with the controller.</p>	<p>We have inquired about whether formalised procedures are in place ensuring that the processor performs a risk assessment in order to achieve adequate security, and we have inspected the procedures.</p> <p>We have inquired about whether the performed risk assessment is updated and comprises the actual processing of personal data, and we have inspected the risk assessment and a control for periodic review.</p>	<p>We have observed that the company's risk assessment does not explicitly take into account the risks of the data subject.</p> <p>We have however observed that the risk analysis includes the data subject.</p> <p>No deviations noted.</p>
B.3	<p>Antivirus is installed on the systems and databases that are used for the processing of personal data, and the antivirus is updated regularly.</p>	<p>We have inquired about a procedure for the use of antivirus, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about the use of antivirus on servers, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.
B.4	<p>External access to systems and databases used for the processing of personal data occurs through a secured firewall.</p>	<p>We have inquired about the use of firewall, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.

No.	Processor's control activity	Auditor's performed test	Test result
B.5	Internal networks are segregated in order to ensure restriction of access to systems and databases used for the processing of personal data.	We have inquired about whether internal networks are segregated in order to ensure restriction of access to systems and databases used for the processing of personal data, and we have inspected network diagrams and an ISAE 3402 assurance report from the company for the service in question.	No deviations noted.
B.6	Access to personal data is isolated to users with a work-related need for this.	<p>We have inquired about a procedure for the creation and deregistration of users, and we have inspected an ISAE 3402 assurance report from the company.</p> <p>We have inquired about documentation for the creation and deregistration of users, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.
B.7	System monitoring with alarming has been established for the systems and databases used for the processing of personal data.	We have inquired about documentation for logging on the company's systems, and we have inspected an ISAE 3402 assurance report from the company for the service in question.	No deviations noted.
B.8	Effective cryptography is used at the transmission of confidential and sensitive personal data via the Internet and via email.	<p>We have inquired about a policy for transmitting data, and we have inspected an ISAE 3402 assurance report from the company for the service in question as well as the company's policy for transmitting data.</p> <p>We have inquired about the use of cryptography, and we have inspected an ISAE 3402 assurance report from the company for the service in question and the results of a penetration test.</p>	No deviations noted.

No.	Processor's control activity	Auditor's performed test	Test result
B.9	<p>Logging has been established in systems, databases, and networks.</p> <p>Log information is protected against manipulation and technical errors and is reviewed regularly.</p>	<p>We have inquired about documentation for logging on the company's systems, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	<p>No deviations noted.</p>
B.10	<p>Personal information used for development, testing or the like is always in pseudonymised or anonymised form. Use is solely for fulfilling the purpose of the controller under the agreement and on their behalf.</p>	<p>We have inquired about procedures for the use of personal data for development, testing and the like, which ensure that personal data is only used in pseudonymised or anonymised form, and we have inspected an ISAE 3402 assurance report from the company for the service in question and technical documentation for anonymisation of personal data.</p>	<p>No deviations noted.</p>
B.11	<p>The established technical measures are regularly tested by means of vulnerability scans and penetration tests.</p>	<p>We have inquired about procedures for ongoing testing of technical measures, including performing vulnerability scans and penetration tests, and we have inspected an ISAE 3402-assurance report from the company for the service in question.</p>	<p>No deviations noted.</p>
B.12	<p>Changes to systems, databases, and networks are made in accordance with established procedures that ensure maintenance by means of relevant updates and patches, including security patches.</p>	<p>We have inquired about change management, and we have inspected the policy for change management. Additionally, we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about documentation for the management of a selected change and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about risk assessments regarding individual rights in relationship to change management, and we have inspected documentation for ongoing risk assessment.</p>	<p>No deviations noted.</p>

No.	Processor's control activity	Auditor's performed test	Test result
B.13	There is a formalised business process for assigning and revoking user access to personal data. User accesses are regularly reassessed, including that rights still can be justified by a work-related need.	<p>We have inquired about formalised procedures for assigning and revoking users' access to systems and databases used for processing personal data, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about documentation for regular - at least annual - assessment and approval of assigned user accesses, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.
B.14	Access to systems and databases in which personal data is processed, which entails a high risk for the data subjects, takes place as a minimum by the use of two-factor authentication.	We have inquired about the company's high-risk processing.	<p>The company has stated that there is no high-risk processing.</p> <p>No further deviations noted.</p>
B.15	Physical access security has been established so that only authorised persons can gain physical access to premises and data centres in which personal information is stored and processed.	We have inquired about formalised procedures to ensure that only authorised persons can gain physical access to premises and data centres where personal information is stored and processed, and we have inspected an ISAE 3402 assurance report from the company for the service in question.	No deviations noted.

Control objective C – Organisational measures

Procedures and controls are observed that ensure that the processor has implemented organisational measures for ensuring relevant security of data processing.

No.	Processor's control activity	Auditor's performed test	Test result
C.1	<p>The processor's management has approved a written information security policy, which has been communicated to all relevant stakeholders, including the processor's employees. The information security policy is based on the performed risk assessment.</p> <p>Regularly – and at least annually – an assessment is made of whether the information security policy should be updated.</p>	<p>We have inquired about the preparation of an information security policy, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about management approval of the information security policy, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about periodic review of the information security policy, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.
C.2	The processor's management has ensured that the information security policy is not contrary to entered processor agreements.	We have inquired about documentation for the company ensuring that the information security policy is not contrary to agreed processor agreements, and we have inspected the control and procedure.	No deviations noted.
C.3	The processor's employees are checked in connection with employment.	<p>We have inquired about a procedure for the recruiting and screening of new employees, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about documentation for screening of the most recent employees, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.
C.4	At employment, employees sign a confidentiality agreement. In addition, the employee is introduced to the information security and procedures regarding data processing as well as other relevant information in connection with the employee's processing of personal data.	<p>We have inquired about confidentiality in the employment relationship, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about staff training, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.

No.	Processor's control activity	Auditor's performed test	Test result
C.5	At the termination of employment, a procedure has been implemented at the processor ensuring that the user's rights are deactivated or terminated, including that assets are returned.	<p>We have inquired about a procedure for offboarding employees, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about documentation for deregistration of users in connection with the termination of employment in the audit period, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.
C.6	At termination of employment the employee is informed that the signed confidentiality agreement still is applicable, and that the employee is subject to a general duty of non-disclosure in relation to the processing of personal data that the processor performs for the controllers.	<p>We have inquired about a policy for offboarding employees, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p> <p>We have inquired about documentation for the use of the policy in the audit period, and we have inspected an ISAE 3402 assurance report from the company for the service in question.</p>	No deviations noted.
C.7	There is periodic awareness training of the processor's employees in relation to information security in general as well as security of data processing in relation to personal data.	We have inquired about execution of awareness training, and we have inspected documentation for execution of awareness training.	No deviations noted.
C.8	There has been an evaluation whether the company has decided to use and DPO or not.	We have inquired about the company's evaluation whether a DPO is needed, and we have inspected the company's evaluation regarding the decision not to appoint a DPO.	No deviations noted.

Control objective D – Return and deletion of personal data

Procedures and controls are observed that ensure that personal data can be deleted or returned if agreed with the controller.

No.	Processor's control activity	Auditor's performed test	Test result
D.1	<p>There are written procedures containing requirements that storage and deletion of personal data occurs in accordance with the agreement with the controller.</p> <p>Regularly – and at least annually – an assessment is performed of whether the procedures should be updated.</p>	We have inquired about a procedure for the deletion of data, and we have inspected the procedure.	<p>We have observed that the company did not have a formal procedure for return and deletion of personal data in accordance with the data processing agreement during the audit period.</p> <p>We have however observed that the procedure was made during the audit period.</p> <p>No further deviations noted.</p>
D.2	There is an agreement about the return and deletion of data.	We have inquired about processor agreements with customers, and we have inspected the template.	<p>We have observed that according to the data processing agreement that a unique agreement about the return and deletion have been made.</p> <p>We were unable to verify that a unique agreement has been made, but we have been able to verify that the data in our samples has been deleted.</p> <p>No further deviations noted.</p>
D.3	<p>At the end of the processing of personal data for the controller, data is according to the agreement with the controller:</p> <ul style="list-style-type: none">) Returned to the controller, and/or) Deleted, where not in conflict with other legislation 	We have inquired about a process for the deletion of data at the expiration of the agreement, and we have inspected the procedure.	No deviations noted.

Control objective E – Storage of personal data

Procedures and controls are observed that ensure that the processor only stores personal data in accordance with the agreement with the controller.

No.	Processor's control activity	Auditor's performed test	Test result
E.1	<p>There are written procedures containing requirements that storage of personal data only occurs in accordance with the agreement with the controller.</p> <p>Regularly – and at least annually – an assessment is made of whether the procedures should be updated.</p>	<p>We have inquired about procedures for securing that the processor only stores personal data in accordance with the processor agreements, and we have inspected the procedures.</p> <p>We have inquired about review of the procedure, and we have inspected documentation.</p>	No deviations noted.
E.2	The processor's processing including storage must only take place at the locations, in the countries, or the territories approved by the controller.	We have inquired about documentation for the controller having approved the locations for processing, and we have inspected the processor agreements.	No deviations noted.

Control objective F – Use of sub-processors

Procedures and controls are observed that ensure that only approved sub-processors are used and that the processor when following up on their technical and organisational measures for protection of the rights of the data subjects and the processing of personal data ensures adequate security of data processing.

No.	Processor's control activity	Auditor's performed test	Test result
F.1	<p>There are written procedures containing requirements to the processor at the use of sub-processors, including requirements on sub-processor agreements and instruction.</p> <p>Regularly – and at least annually – an assessment is made of whether the procedures should be updated.</p>	<p>We have inquired about a procedure for supplier management, and we have inspected the procedure.</p> <p>We have inquired about review of the procedure, and we have inspected documentation for this.</p>	No deviations noted.
F.2	<p>The processor solely uses sub-processors for the use of processing of personal data that are specifically or generally approved by the controller.</p>	<p>We have inquired about documentation for the company only using sub-processors for processing personal data that are specifically or generally approved by the controller, and we have inspected processor agreements.</p>	No deviations noted.

No.	Processor's control activity	Auditor's performed test	Test result
F.3	In case of changes to the use of generally approved sub-processors, the controller is informed in a timely manner in order to be able to raise objections and/or withdraw personal data from the processor. In case of changes to the use of specifically approved sub-processors, this is approved by the controller.	We have inquired about a procedure for changes to sub-processors, and we have inspected procedures for changes to sub-processors.	We have observed that the company did not have a formal procedure for ensuring that change in use of the use of sub-processors is performed in accordance with the data processing agreement during the audit period. However, we have observed that such procedures have been implemented during the audit period. No further deviations noted.
F.4	The processor has subjected the sub-processor to the same data protection obligations as those stated in the processor agreement or the like with the controller.	We have inquired about documentation for the sub-processor being subject to the same obligation as the processor, and we have inspected the agreements.	No deviations noted.
F.5	The processor has a list of approved sub-processors.	We have inquired about a list for approved sub-processors including adequate identification, and we have inspected a list of sub-processors.	No deviations noted.
F.6	On the basis of an updated risk assessment of each sub-processor and the activity taking place at this sub-processor, the processor performs periodic follow-up on this at meetings, inspections, review of assurance report, or similar.	We have inquired about documentation for the company performing periodic supervision and inspection of each sub-processor, and we have in spot checks inspected documentation for supervision.	No deviations noted.

Control objective G – Transfer of personal data to third countries

Procedures and controls are observed that ensure that the processor only transfers personal data to third countries or international organisations in accordance with the agreement with the controller on the basis of a valid ground for transfer.

No.	Processor's control activity	Auditor's performed test	Test result
G.1	There are written procedures containing requirements that the processor only transfers personal data to third countries or international organisations in accordance with the agreement with the controller on the basis of a valid ground for transfer.	We have inquired about whether data is transferred to third countries, and we have been informed that all data is located in the EU and the EEA.	We have been informed that the company does not transfer data outside the EU and EEA. No further deviations noted.

Control objective H – Rights of the data subjects

Procedures and controls are observed that ensure that the processor can assist the controller with handing over, correcting, erasing, or the restriction of and providing information about the processing of personal data to the data subject.

No.	Processor's control activity	Auditor's performed test	Test result
H.1	<p>There are written procedures containing requirements that the processor must assist the controller in relation to the rights of the data subjects.</p> <p>Regularly – and at least annually – an assessment is made of whether the procedures should be updated.</p>	<p>We have inquired about a procedure for the company being able to assist the processor with requests concerning personal data, and we have inspected the procedure.</p> <p>We have inquired about documentation for periodic review of the procedure, and we have inspected documentation.</p>	No deviations noted.
H.2	<p>The processor has established procedures that to the extent agreed permits timely assistance to the controller in relation to handing over, correcting, erasing, or the restriction of and providing information about the processing of personal data to the data subject.</p>	<p>We have inquired about documentation for the possibility of right to access, and we have inspected documentation for the possibility of granting access.</p> <p>We have inquired about documentation for the possibility of erasing data, and we have inspected documentation for the possibility of anonymising or erasing data.</p> <p>We have inquired about documentation for the possibility of correcting data, and we have inspected documentation for correction of data being possible.</p> <p>We have inquired about the handling of requests from the data subjects in the audit period.</p>	<p>We have been informed that the company has not registered any requests from data subjects during the audit period.</p> <p>No deviations noted.</p>

Control objective I – Managing personal data breaches

Procedures and controls are observed that ensure that any personal data breaches can be managed in accordance with the entered processor agreement.

No.	Processor's control activity	Auditor's performed test	Test result
I.1	There are written procedures containing requirements that the processor must inform the controller in case of personal data breaches. Regularly – and at least annually – an assessment is made of whether the procedures should be updated.	We have inquired about a procedure for managing personal data breaches, and we have inspected the procedure. We have inspected documentation for the management of the latest personal data security incident.	No deviations noted.
I.2	The processor has established controls for identification of any personal data breaches	We have inspected awareness training documentation and inquired about controls the training of employees to ensure correct management of personal data breaches.	No deviations noted.
I.3	In case of a personal data breach the processor has informed the controller without undue delay after finding out that the personal data breach has occurred at the processor or a sub-processor.	We have inquired about personal data breaches, and we have inspected a breach log and detailed descriptions of critical incidents.	We have been informed that there have not been information security breaches in the audit period, which means we have not been able to verify the effectiveness of the HeroBase's relevant procedures.

No.	Processor's control activity	Auditor's performed test	Test result
I.4	<p>The processor has established procedures for assisting the controller at the controller's notification to the Danish Data Protection Agency (Datatilsynet):</p> <ul style="list-style-type: none">) The type of personal data breach) Probable consequences of the personal data breach) Measures taken or suggested to be taken in order to manage the personal data breach	<p>We have inquired about a procedure for managing personal data breaches, and we have checked that the procedure considers:</p> <ul style="list-style-type: none">) Description of the type of personal data breach) Description of the probable consequences of the personal data breach) Description of measures taken or suggested taken in order to manage the personal data breach <p>Additionally, we have inspected the procedure.</p>	No deviations noted.

Control objective K – Record of processing activities

Procedures and controls are observed that ensure that the processor maintains a record of categories of processing activities performed on behalf of the controller.

No.	Processor's control activity	Auditor's performed test	Test result
K.1	<p>The processor keeps a record of categories of processing activities for each controller, containing:</p> <ul style="list-style-type: none">) Name and contact information on the processor for each controller and – if relevant – the controller's Data Protection Officer) The categories of processing performed on behalf of each controller) Transfer of personal data to third countries or international organisations, and in case of transfers according to Article 49, paragraph 1, second subparagraph, documentation for adequate guarantees) A general description of the technical and organisational measures 	We have inquired about the preparation of a record, and we have inspected the record.	No deviations noted.
K.2	Regularly – and at least annually – an assessment is made of whether the record of categories of processing activities for each controller should be updated.	We have inquired about periodic update of the record, and we have inspected documentation for the record being updated.	No deviations noted.
K.3	Management has ensured that the record of categories of processing activities for each controller is adequate, updated, and correct.	We have inquired about management approval of the record, and we have inspected documentation for management approval.	No deviations noted.
